Protective covers

A simple solution to work hygienically and prevent the risk of contamination in maternity wards

Value Life

International recommendations

"Disinfection strategy, guidelines for clinical practice and control charts should be established in each obstetrics unit to prevent nosocomial infections."

Nosocomial infection in mother and child: specific risk in the labour ward. 2000

"The very first requirement in a hospital is that it should do the sick no harm."

Florence Nightingale - Pioneering modern nursing

Protective covers

Birthing ball and positioning pillow covers are available in many maternity wards. But have you ever thought about the "hygiene" aspect of this type of accessories, which are going from patient to patient?

The disposable protective covers may be included in the hospital disinfection strategy.

These products will help to:

- Protect the material from particles and fluids
- Help medical staff in the disinfection process
- Limit the risk of cross-contamination in the unit
