SUREFUSER™+

VARIABLE AND CONTINUOUS ELASTOMERIC INFUSION SYSTEM

An excellent solution for ambulatory infusion therapies

Surefuser+ is suitable for ambulatory therapies that require a continuous, steady infusion.

Common therapies include: chemotherapy, antibiotics, pain management, and treatment of thalassemia. Nipro offers a wide range of volumes and flow rates in both variable and continuous infusion.

Improved comfort and mobility for patients

Surefuser+ is portable, lightweight, ergonomic, and silent. There is no need for batteries or electricity, making it mobile and maintenance-free. With our Nipro Surefuser+ bag, it is also easy to wear.

Daily activities and light-to-moderate exercise are still possible.

Easy to set up and use

Surefuser+ is a self-powered and highly reliable device. It provides a steady flow rate through constant elastomeric pressure, thanks to its isoprene balloon. It combines simplicity with efficiency for home care applications.

Safety & Quality

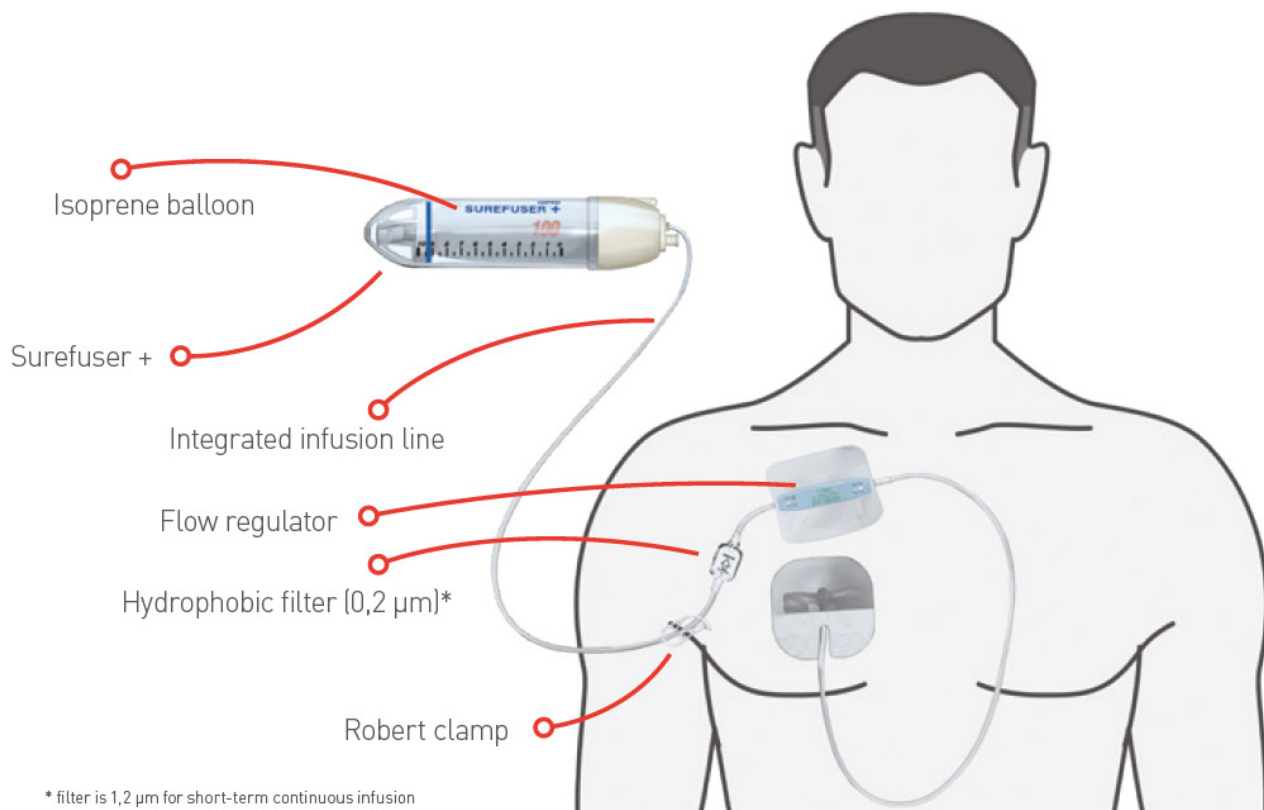

- Strong lightweight housing
- Not made with latex, DEHP or BPA*
- Efficient particle and self-venting 0,2 µm† filter that eliminates air bubbles
- Strong port connector with an integrated anti-kinking, flexible infusion line
- Consistent and controlled flow rate
- Thermosensitive flow regulator calibrated at skin temperature

Drug stability testing has been undertaken by an independent laboratory, ensuring the reliability of our data.

* below the threshold of 0,1%

† filter is 1,2 µm for short-term continuous infusion

SAFE

Back-check valve with an integrated infusion line decreases the risk of contamination and leakage.

EASY TO FOLLOW INFUSION PROGRESS

Scale and blue progression line allow for clear identification of therapy progress.

COST-EFFECTIVE

Residual volume has been reduced to a minimum, thereby limiting drug waste.
